Presentation

The Advanced Course in Orthopedic Surgery in Companion Animals I offers highly specialized training to meet the growing evolution and needs of the job market in this area. The course aims to provide motivated, high-potential students with hands-on practical training, using models, simulators, clinical skills and other resources. This specialized lifelong learning (CPD) offer is based on the pillars of excellent teaching, founded on scientific evidence and the acquisition of skills for solving complex situations in real work contexts. It allows equivalence to the Curricular Units of the Master's Degree in Companion Animal Surgery.
