## Presentation

The pressures of the markets and stakeholders are increasingly demanding in terms of corporate, social and environmental sustainability, which is why there is an urgent need to train graduates with theoretical and practical knowledge not only of current legislation, quality management systems, the environment, safety, energy and operational risk, but also of technological innovation that promotes the competitiveness of organisations in the markets. This postgraduate programme is the result of a partnership between Universidade Lusófona and APCER and aims to be a high-level project, promoting the qualification of professionals in the areas of environmental sustainability and energy efficiency in companies and the integrated implementation of various management systems. It guarantees alignment with the latest regulatory requirements and best practices, providing students with applied learning geared towards market needs.

# STUDY PLAN

## 1st Year / No Branch Name

---

Anual	ects
