### Presentation

This intensive course has been designed for veterinary surgeons and veterinary students who wish to develop their skills in digital imaging and avian surgery, combining clinical reasoning, technical expertise and decision-making based on real-life cases. With a highly practical and results-oriented approach, the course will explore current methods and surgical strategies applicable in both companion animal practice and in the context of exotic and wild birds. Throughout the course, participants will develop a structured understanding of digital avian radiology, master proven techniques and refine advanced surgical approaches to the coelomic cavity.
