Presentation

The course aims to provide students with advanced knowledge and practical skills, preparing them for the sector's evolving trends and demands. Students will have the opportunity to explore the most up-to-date anatomical and pathophysiological concepts relating to the cervical and maxillofacial regions in companion animals, enabling them to identify patients requiring surgery. The basic concepts and general equipment required to perform this type of surgical procedure will be presented, as well as the latest and most up-to-date surgical techniques, together with the most common complications.
