Presentation

The "Fire Behavior" Microcredential corresponds to the AGIF Microcredential, AI4 - Fire Behavior. It provides technical knowledge on the main factors that influence the behavior of wildfires, namely meteorology, fuels, and topography. The course covers the analysis and prediction of fire behavior, the use of decision-support tools, and the interpretation of fire spread scenarios, thereby supporting prevention, suppression, and protection strategies. The training emphasizes practical application in operational contexts and an understanding of extreme fire behavior situations within the framework of the Integrated Rural Fire Management System (SGIFR).
